

**MEPS NURSING HOME COMPONENT
FILE NHC-003**

FACILITY CHARACTERISTICS, FULL-YEAR FILE

This file provides information collected on a nationally representative sample of 1996 nursing homes (NHs). The file contains data on 1,229 facilities; one record per facility. Data were obtained in Rounds 1, 2, and 3, from sampled facilities (SF) and from new facilities (NF; nursing homes that sampled persons transferred to during 1996). The file variables pertain to characteristics of the facility including information on the facility structure, size, ownership, certification status, services provided to residents and non-residents, and staffing. The data provided on this file correspond with the facility questions from the: Rounds 1-3 Sampled Facility Questionnaires, Rounds 2-3 New Facility Questionnaires, and the Rounds 1 & 3 Self-Administered Questionnaires (SAQ).

The structure of some institutions that provide residential care or treatment continues to become increasingly complex. The MEPS NHC Facility Questionnaires were designed to elicit this complexity. Some nursing homes or units exist within larger establishments (e.g., CCRCs, hospitals), and in such cases the entity that was identified for data collection might be the larger facility, or the nursing home or unit within the larger facility, or only one of several nursing units within the larger facility. Therefore, the Facility Questionnaires were designed to be able to identify the larger facility, each eligible nursing home/unit within the larger establishment, as well as other non-hospital residential parts. For complex facility configurations a record on this file represents the bundling of all eligible nursing homes and nursing home units within the larger configuration.

Many of the data items collected for sampled facilities in Round 1 have been edited and imputed. Edited variables have an "ED" denoted in the variable label. Variables that map directly to a question have the question number in the variable label. Variables constructed by AHRQ staff have "CONST" denoted in the variable label.

The variable FACELIG identifies a facility as a sampled facility (n=952) or a new facility (n= 277), as well as indicating the eligibility status of the facility. The variables SFID and NHID can be used to link characteristics of the facility to MEPS NHC persons that resided in that NH. Care should be taken when merging facility-level data to person-level data; a person will link to only one SFID, but can link to multiple NHIDs (in the case of a person transferring during the year to one or more other NH's).

There are several types of variables on this file: 1) those which apply only to the sampled facilities; 2) those which apply only to the new facilities; and 3) those which apply to both types of facilities. Variables at the start of the file, NHID through RHNUM1X, refer to data collected about sampled facilities, new facilities, or both sampled and new facilities. For these variables, the variable label indicates which facility type (SF, NF, or SF & NF) the variable pertains to. These are followed by the variables CAIDSTILL through PHYSB118 which pertain only to sampled facilities (except for the variable GRPCONTR, which was also collected for new facilities); this is not reflected in the variable labels. The next group of variables, OTHPHYS through EMPLPHY3, refers to either

sampled facilities or new facilities, which is indicated in the variable labels. Finally, all variables from COSTRINF through SCURA2 pertain to sampled facilities only, which is not reflected in the variable labels.

Variables are ordered on this file as they pertain to the following questions:

- FA questions - These pertain to items from the Round 1 Sampled Facility Questionnaire and to similar items from the New Facility Questionnaires.
- RH questions - This information was originally collected with the person-level Residence History Questionnaire. This information described some of the care units of the facility and thus was converted to facility-level items.
- FB questions - Pertain primarily to the sampled facility and were collected during Round 2. A few of the variables also pertain to new facilities; these are denoted in the variable label.
- SAQ Round 1 questions - Self-Administered Questionnaire items collected during Round 1 from the sampled facilities. Some Round 1 sampled facilities failed to complete the Round 1 SAQ.
- SAQ Round 3 questions - Self-Administered Questionnaire items collected during Round 3, primarily from the sampled facilities. The variable label denotes those few items that were also collected from the new facilities. Some of the facilities failed to complete the Round 3 SAQ.
- FC questions - Were collected in Round 3 from the sampled facilities. Some facilities failed to complete the Facility Cost section of the Round 3 Sampled Facility Questionnaire.
- FR questions - Were collected in Round 1 from the sampled facilities. Some facilities failed to complete the Facility Rate section of the Round 1 Sampled Facility Questionnaire.

To obtain national estimates for the sampled nursing homes on this file, the sampling weight (FRAKEWT3) provided on this file must be used. Prior to estimation, facilities with FACELIG = 2, 3 or 4 should be excluded from analysis. It is not possible to make facility-level estimates while controlling for sampled person characteristics (residents case mix) given the sample design of the MEPS NHC.
