

AGENCY FOR HEALTHCARE RESEARCH AND QUALITY

## STATISTICAL BRIEF #528

February 2020

# Concentration of Healthcare Expenditures and Selected Characteristics of Persons with High Expenses, U.S. Civilian Noninstitutionalized Population, 2017

Emily M. Mitchell, PhD

### Highlights

- In 2017, the top 1 percent of persons ranked by their health care expenditures accounted for about 22 percent of total health care expenditures, while the bottom 50 percent accounted for only about 3 percent.
- Persons ages 65 and older and whites were disproportionately represented in the top spending tiers.
- Inpatient hospital care accounted for 40 percent of spending for persons in the top 5 percent of the spending distribution.
- About three quarters of aggregate expenses for persons in the top 5 percent of spenders were paid for by private insurance and Medicare.

### Introduction

In 2017, spending on health care accounted for 17.9 percent of the United States GDP,<sup>[1]</sup> yet the majority of this spending was concentrated in a relatively small percentage of the population. In fact, about 15 percent of the U.S. civilian noninstitutionalized population had no health care expenditures in 2017, and only 5 percent of the population accounted for over half of health care spending. This includes all sources of payments for medical care, including private insurance payments, Medicare, Medicaid, out-of-pocket spending, and other sources.

In this Statistical Brief, data from the Agency for Healthcare Research and Quality's (AHRQ) Medical Expenditure Panel Survey Household Component (MEPS-HC) are used to describe the overall concentration of health care expenses across the U.S.

---

<sup>[1]</sup> Sisko, A, et al. National Health Expenditure Projections, 2018–27: Economic and Demographic Trends Drive Spending and Enrollment Growth. *Health Affairs*, March 2019.

civilian noninstitutionalized population in 2017. In addition, different spending tiers are compared on selected dimensions including age, race/ethnicity, type of medical service, and aggregate spending distributions by source of payment. All differences discussed in the text are statistically significant at the 0.05 level.

## Findings

*Overall (table 1, figures 1 and 2)*

In 2017, the top 1 percent of persons ranked by their health care expenditures accounted for 21.9 percent of total health care expenditures (100 minus 78.1 percent; figure 1), with an annual mean expenditure of \$116,331 (figure 2). The group within the top 1 percent is defined as persons who spent \$66,454 or more during the year. Cut-points for additional percentile groups are shown in table 1. The top 5 percent of the population accounted for 50.1 percent of total expenditures (100 minus 49.9 percent), with an annual mean expenditure of \$53,174. The bottom 50 percent accounted for only 2.9 percent of total health care expenditures. Persons in this group spent less than \$1,051 during the year (table 1), with an average annual expenditure of \$305.

**Table 1. Percentile of population ranked by spending and amount spent during the year**

<b>Percentile of population</b>	<b>2017 Expenditure</b>
Top 1%	\$66,454 or more
Top 5%	\$23,509 or more
Top 10%	\$12,667 or more
Top 30%	\$3,107 or more
Bottom 50%	Less than \$1,051

*Age (figure 3)*

Older persons were disproportionately represented in the higher health care spending tiers (figure 3). Among the entire U.S. civilian noninstitutionalized population in 2017, 16.2 percent were 65 and older, while 22.7 percent were under age 18. Among the top 5 percent of spenders, however, 41.7 percent were 65 and older, while only 6.4 percent were children under age 18. In contrast, among the bottom 50 percent of spenders, 30.7 percent were children while only 5.5 percent were 65 years and older.

*Race/Ethnicity (figure 4)*

Whites were disproportionately represented among the top 50 percent of spenders, while Hispanics were underrepresented in this higher spending group. Whites comprised 59.9 percent of the U.S. civilian noninstitutionalized population in 2017 but accounted for 69.6 percent of the top half of spenders. Hispanics, on the other hand, comprised 18.3 percent of the population but only 12.5 percent of the top half of spenders.

*Type of service (figure 5)*

Compared to the overall population, expenses for persons in the bottom 50 percent of spenders were less likely to go toward inpatient stays or home health expenses (0.1 percent for each), and more likely to go toward ambulatory events (54.3 percent).

In the top 5 percent of spenders, on the other hand, 39.5 percent of their expenses were for inpatient stays. This comparatively high proportion of expenditures is a combination of the fact that persons in the top spending percentiles are much more likely to have at least one inpatient stay during the year, and those stays tend to cost more relative to other types of service.

#### *Source of payment (figure 6)*

Nearly half of aggregate expenses for the bottom 50 percent of spenders were paid for by private insurance (47.4 percent), while out-of-pocket payments accounted for around a quarter of the expenditures for this group (26.7 percent). Medicare payments comprised only 4.0 percent of payments for this low-spending group.

For persons in the top 5 percent spending tier, Medicare paid for 33.7 percent and private insurance paid for 38.6 percent of medical expenses. Out-of-pocket payments for this group comprised only 5.7 percent of total expenses.

#### **Data Source:**

The estimates shown in this Statistical Brief are based on data from the MEPS 2017 Full Year Consolidated File (HC-h201).

#### **Definitions:**

##### *Age*

Age was defined as age at the end of the year 2017 (or on last date of MEPS eligibility if person was out of scope at the end of the year).

##### *Concentration curve*

A concentration curve is a graphical representation of the distribution of a variable of interest, such as income or expenditures, across the percentage of the population. The cumulative percentage of the population is represented along the X-axis and the cumulative percentage of expenditures is represented on the Y-axis. A point at the X-axis value of 50% and the Y-axis value of 10%, for instance, indicates that the bottom 50% of the population accounts for 10% of total spending, and conversely, the top 50% accounts for 90% of total spending. Similarly, a point at the X-axis value of 99% and the Y-axis value of 82% indicates that the bottom 99% of the population accounts for 82% of spending, and conversely, that the top 1% of the population accounts for 18% of expenditures.

##### *Expenditures*

Total expenditures were defined as the sum of payments from all sources to hospitals, physicians, other health care providers (including dental care), and pharmacies for services reported by respondents in the MEPS-HC.

### *Percentiles*

Percentiles of spending were formed by ordering sampled persons by their total expenditures from highest to lowest, then allocating persons to groups based on weighted percentage of the population. Near the cut point of each percentile, a person was included in the top percentile group if their added weight did not surpass the specified percentile. In the case of ties, where two or more people had the same expenditures close to a percentile cut point, the person with the lower weight was included in the higher percentile group. In this brief, the 'Bottom 50%' and 'Top 50%' are mutually exclusive, while the 'Top 50%', 'Top 30%', 'Top 10%', 'Top 5%' and 'Top 1%' are not.

### *Race/Ethnicity*

MEPS respondents were asked if each family member was Hispanic or Latino and about each member's race. Based on this information, categories of race and Hispanic origin were constructed as follows:

- Hispanic
- White, non-Hispanic, with no other races reported
- Black, non-Hispanic, with no other races reported
- Asian, non-Hispanic, with no other races reported and other/multiple races, non-Hispanic

### *Sources of payment*

- Out-of-pocket: Expenses paid by the user or other family member.
- Private insurance: Payments made by insurance plans covering hospital and medical care (excluding payments from Medicare, Medicaid, and other public sources). Payments from Medigap plans or TRICARE (Armed Forces-related coverage) are included.
- Medicare: Payments by Medicare which is a federally financed health insurance plan for persons age 65 and older, persons receiving Social Security disability payments, and persons with end-stage renal disease.
- Medicaid/CHIP: Payments by Medicaid and CHIP which are means-tested government programs jointly financed by federal and state funds that provide health care to those who are eligible. Medicaid is designed to provide health coverage to families and individuals who are unable to afford necessary medical care while CHIP provides coverage to additional low-income children not eligible for Medicaid. Eligibility criteria for both programs vary significantly by state.
- Other sources: Includes payments from the Department of Veterans Affairs (except TRICARE); other federal sources (Indian Health Service, military treatment facilities, and other care provided by the Federal Government); various state and local sources (community and neighborhood clinics, state and local health departments, and state programs other than Medicaid/CHIP); Workers' Compensation; and various unclassified sources (e.g., automobile, homeowner's, or other liability insurance, and other miscellaneous or unknown sources).

### *Type of service*

- **Ambulatory:** Includes office-based visits (visits to medical providers seen in office settings), hospital outpatient visits, and emergency room visits. Expenses for outpatient and emergency room visits include payments for services covered under the basic facility charge and those for separately billed physician services. Emergency room payments exclude expenses for emergency room services that are included in a hospital inpatient admission.
- **Hospital inpatient:** Includes room and board and all hospital diagnostic and laboratory expenses associated with the basic facility charge, payments for separately billed physician inpatient services, and some emergency room expenses incurred immediately prior to inpatient stays.
- **Prescribed medicines:** Includes expenses for all prescribed medications that were initially purchased or refilled during the year.
- **Home health:** Includes expenses for home care provided by agencies and independent providers.
- **Dental and other:** Includes payments for services to any type of dental care provider as well as expenses for care in all categories not specified as a separate category (e.g., medical equipment and supplies).

### **About MEPS**

The MEPS-HC is a nationally representative survey that collects detailed information on health care utilization and expenditures, health insurance, and health status, as well as a wide variety of social, demographic, and economic characteristics for the U.S. civilian noninstitutionalized population. The MEPS-HC is cosponsored by the Agency for Healthcare Research and Quality (AHRQ) and the National Center for Health Statistics (NCHS). More information about the MEPS-HC can be found on the MEPS Web site at <http://www.meps.ahrq.gov/>.
